EXPERIMENT-04

Find the Last Connected USB Device Using USBDeview

Aim

To identify the last connected USB device on a Windows system using USBDeview and examine its connection details for forensic investigation.

Requirements

- Windows computer
- USBDeview utility
- Administrative privileges if required to access certain device information

Procedure

Step 1: Download USBDeview

- Visit the official NirSoft website: https://www.nirsoft.net/utils/usb_devices_view.html
- Download the appropriate USBDeview package.
- Extract the downloaded files and launch USBDeview.exe.

Step 2: View USB Devices

- Run USBDeview on the target Windows system.
- Allow the utility to display currently connected and previously connected USB devices.
- Review the device list and identify USB storage devices.

Step 3: Examine Device Details

- Inspect the following fields for each relevant device:
- Device name and description
- Device type
- Serial number, if available
- Vendor ID and Product ID
- First connection and last connection timestamps, where available
- Current connection status

Step 4: Identify the Last Connected USB

- Locate the Last Plug/Unplug Date or corresponding last-connection field.
- Sort the device list by that field, if supported by the installed version.
- Identify the most recent connection event.
- Cross-check the timestamp and device details with relevant Windows records when necessary.
- Record the device information for the lab report.

Step 5: Document the Findings

- Record the device name, serial number, vendor ID, product ID, connection timestamp, and current status in the observation table. Capture a screenshot showing the relevant USBDeview entry.

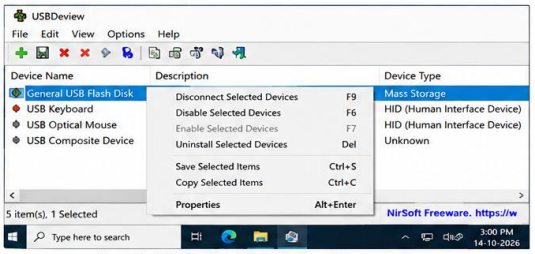

Figure 5: USB Options (Disable/Uninstall/Properties)

Result :

- USBDeview successfully displayed a comprehensive list of USB devices connected to the system.
- You obtained critical forensic information like the last connection timestamp, device serial numbers, and manufacturer information.
- This data helps trace and verify USB device usage history on the system, supporting forensic investigations involving removable media.
