NAME: Arilli Jagadeesh A **ROLL NO: 241901502**

EXPERIMENT-05

View Last Activity of Your PC Using LastActivityView

Aim

To examine recent user activities and system events on a Windows computer using LastActivityView and identify available activity timestamps.

Requirements

- Windows computer
- LastActivityView utility
- Administrative privileges, if required

Procedure

Step 1: Download LastActivityView

- Visit the official NirSoft website: https://www.nirsoft.net/utils/computer_activity_view.html
- Download LastActivityView from its official utility page.
- Extract the downloaded ZIP file.
- Run LastActivityView.exe.

Step 2: View Activity Records

- Launch LastActivityView.
- Allow the utility to collect and display available activity records.
- Review the activity description, filename, full path, and event time where available.

Step 3: Examine User and System Activities

- Inspect the available records for:
- Application execution
- File and folder activity
- Software installation or removal
- USB device connections
- Browser-related activity
- Other supported Windows events

The records depend on the data sources available on the computer. Not every activity type will necessarily be present.

Step 4: Identify the Last Recorded Activity

- Locate the Event Time or corresponding timestamp column.
- Sort the records by time, if supported.
- Identify the most recent relevant event.
- Note its description, associated file or application, and timestamp.
- Use the search or filtering options to examine a specific event or time range.

Step 5: Save and Document the Findings

- Select the relevant activity records.
- Use the available save or export option to create a report.
- Record the event description and timestamp in the observation table.
- Capture a screenshot showing the relevant entries.

Result:

- LastActivityView successfully captured a detailed log of user and system actions.
- The chronological event log supported reconstructing user behavior on the PC.
- This information aids forensic investigators in timeline analysis and identifying actions relevant to investigations.
