EXPERIMENT-10
Extraction of EXIF Data from Image Files Using ExifReader

Aim:

To extract and examine Exchangeable Image File Format (EXIF) metadata from image files using ExifReader for digital forensic investigation.

Tools Required

- ExifReader (`ExifRead.exe`)
- Windows computer
- Sample JPEG/JPG image
- Screenshot utility for documentation

Procedure:

Step 1: Download ExifReader

- Obtain ExifReader from a trusted source.
- Download the compatible application package.
- Extract the files if the download is a ZIP archive.

Step 2: Launch ExifReader

- Open the extracted folder.
- Run `ExifRead.exe` if that is the executable supplied with your version.
- Wait for the application to open.

Step 3: Load an Image

- Click **Open** in the application.
- Browse to a sample JPEG/JPG image.
- Select the image and confirm the selection.
- Wait for the metadata to load.

Step 4: Examine EXIF Metadata

Inspect the available fields, including:

- Camera manufacturer and model
- Original date and time
- Exposure time, aperture, and ISO
- Focal length and image dimensions
- GPS coordinates, if present
- Editing software information

NAME: Arilli Jagadeesh A **ROLL NO: 241901502**

Step 5: Record Findings

- Note the important metadata fields.
- Record the image filename and relevant timestamps.
- Capture screenshots of the metadata results.
- Save or export the results if the application supports it.

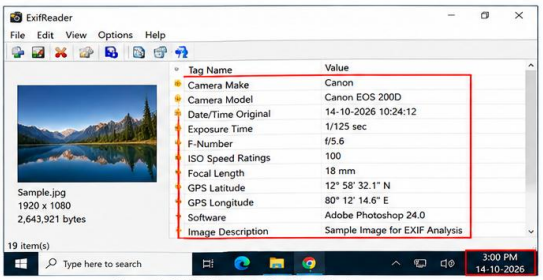

Figure 4: EXIF Metadata Details of the Image

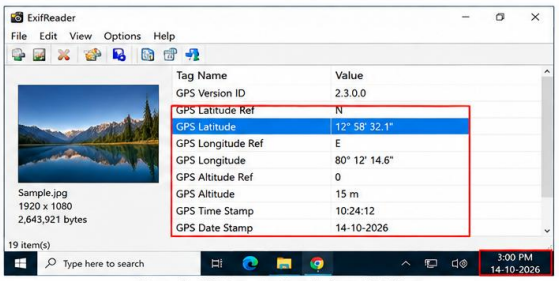

Figure 5: GPS Location Details from EXIF Data

Result:

- The EXIF data was successfully extracted and displayed.
- Important information such as the image capture time, camera details, and GPS location (if embedded) was retrieved.
- The data provides valuable forensic evidence about the origin and editing history of the image file.
